[02] SDG02: Zero Hunger

[2.5.3] University access to local farmers and food producers

Description :

Universitas Indonesia provides access to university facilities to local farmers and food producers to improve sustainable farming practices. The community service and empowerment program related to the Kalilicin Farmer Group in Pancoran Mas District, Depok City, West Java is an ongoing program. A confirmation of the continuous empowerment of star fruit farmers who also produce honey products as a derivative of Klanceng bee biopharmaceuticals. This program is tremendously important because it shows how campuses can participate in becoming consumers of local products, as well as sharing education and working with the community to ensure food security for urban communities.

University of Indonesia, which is located in an urban area, is truly aware about the dangers of the disappearance of green areas and productive areas for society that can be useful in providing food and the necessities of daily life. Due to the increasingly eroded urban agricultural areas of the community, institutional cooperation is needed as a form of advocating with local food producing communities.

No.	Program	Evidence Link
1.	Klanceng bee cultivation as an effort to intensify and extend star fruit farming.	http://berita.baca.co.id/42539147
