[5] SDG5: GENDER EQUALITY

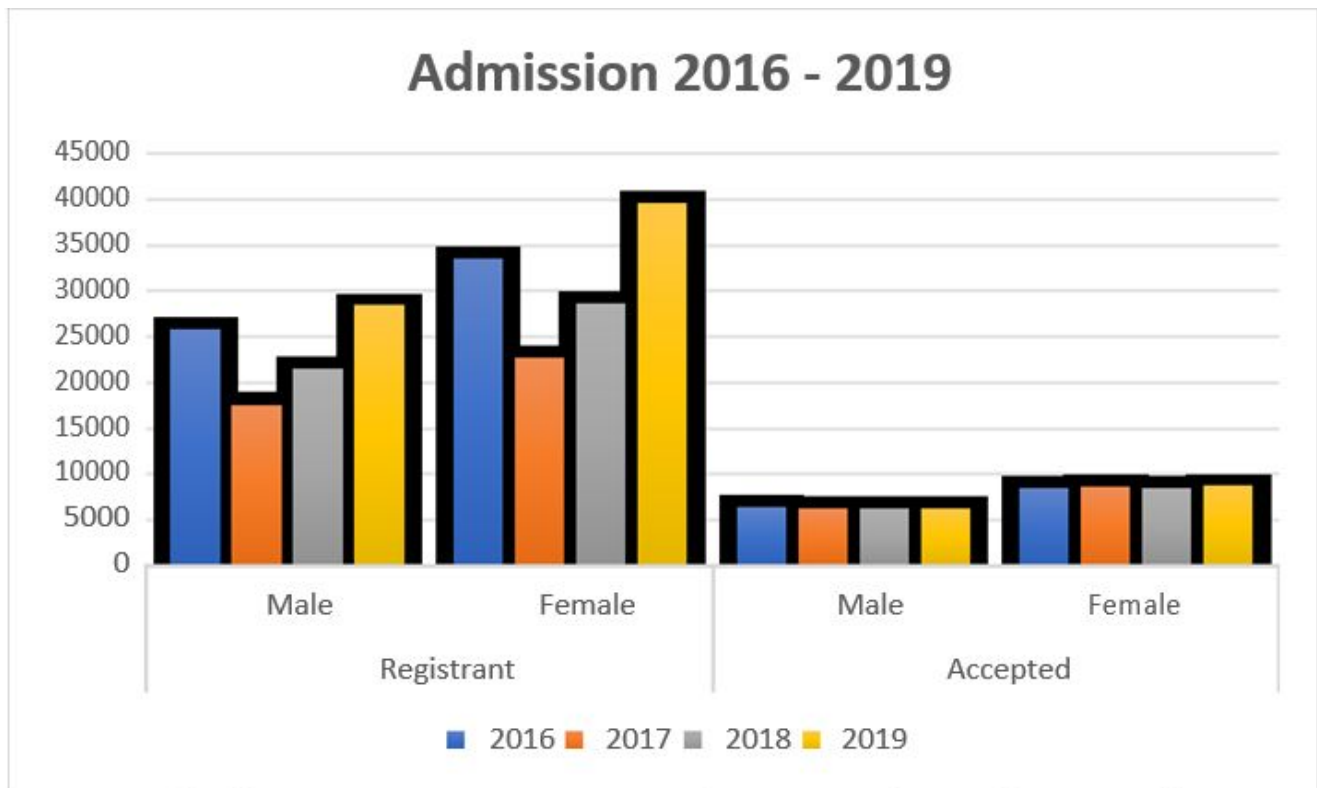

[5.3] Women's access schemes

[5.3.3] Women's access schemes

Description :

Universitas Indonesia provides women's access schemes in education, scholarship, and student's communities. In 2019, the number of female students starting a degree exceeded it is of male students (59.85 % female students vs. 40.15 percent male students). This proportion of female and male students are held across faculties, with several faculties such as the Faculty of Public Health have predominantly female students. Female students have also taken a significant role in student's communities for example Mapala UI clubs (outdoor activities). UI also supports women in gaining scholarships.

From the beginning of its academic process, UI has applied the same opportunities for male and females to be accepted as UI's students. So, there are no gender inequalities in studying at UI. The total number of female at the University of Indonesia registrants and accepted are higher than male. The difference between female and male participants who were accepted over a 4-year period was almost the same which illustrates that women have the same opportunities as male participants to continue their education at Universitas Indonesia.

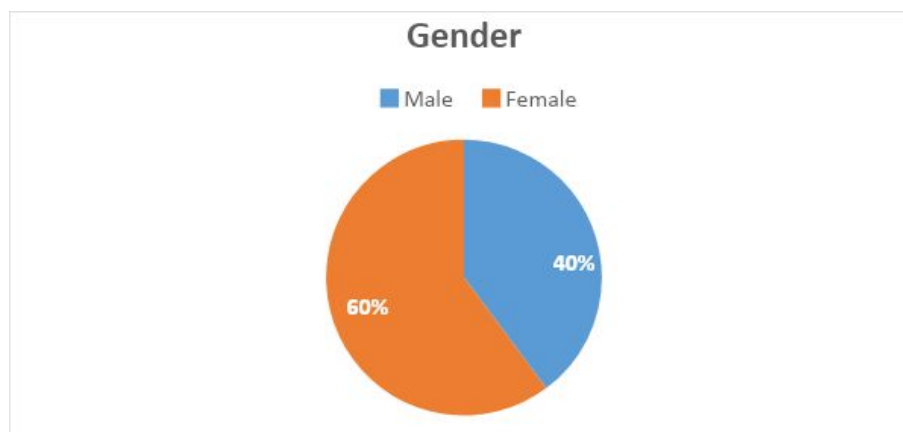

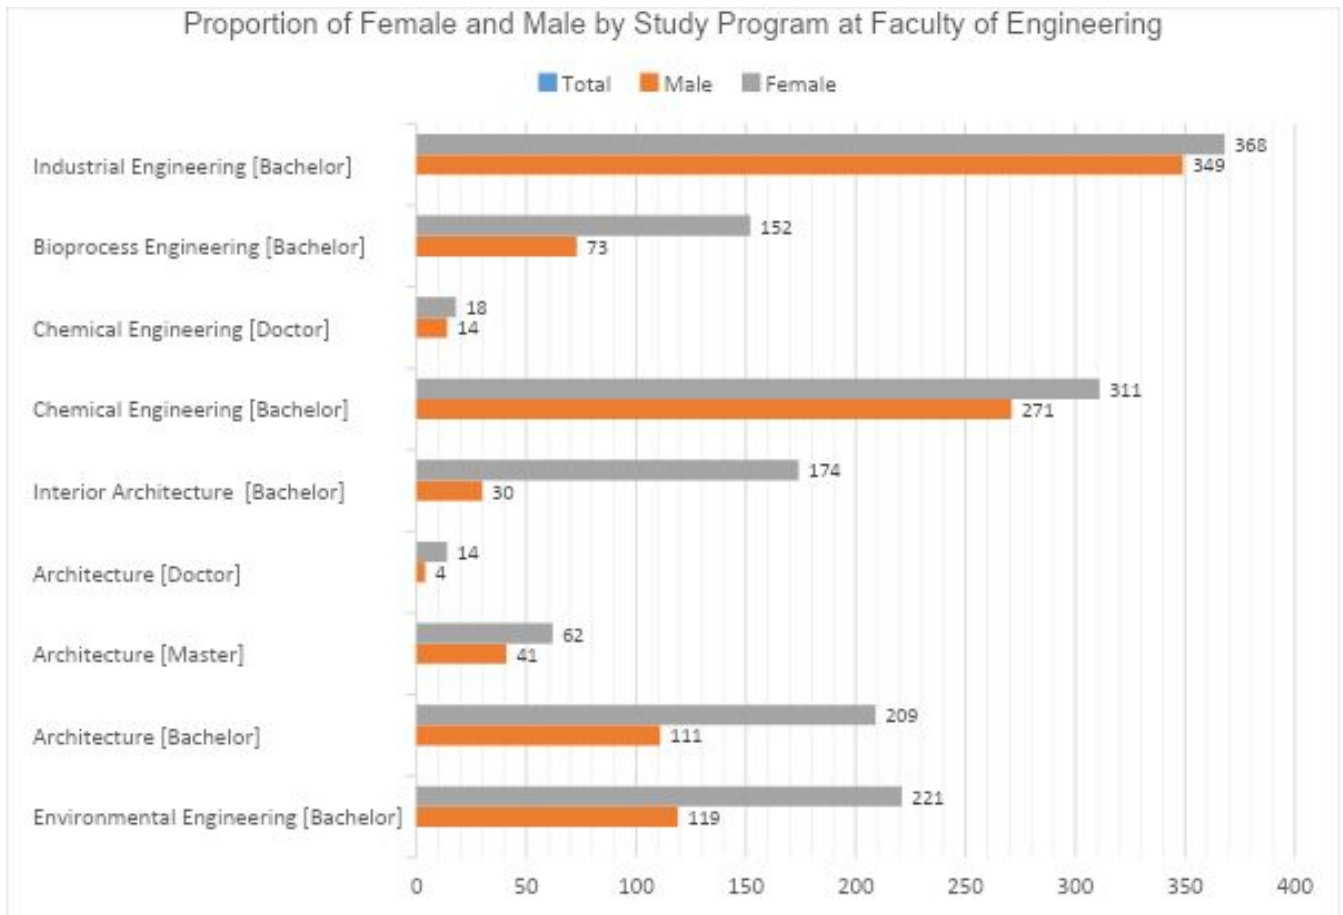

Graph of 2016-2019 Universitas Indonesia student admission data

UI has proportional number of male and female students, even at the Faculty of Public Health, the students are mostly female as shown in the table below.

Study Program	Males	Females
Public Health Science [Master]	83	392
Public Health Science [Doctor]	38	98
Environmental Health [Bachelor]	39	182
Public Health [Bachelor]	123	718
Health Policy and Administration [Master]	79	160
Epidemiology [Master]	26	87
Epidemiology [Doctor]	21	20
Public Health Nutrition [Bachelor]	22	212
Occupational Health and Safety [Bachelor]	71	116
Occupational Health and Safety [Master]	112	86
Total	614	2071

Table Proportion of Male and Female Based on Study Program at Faculty of Public Health

Whilst at the Faculty of Engineering, which is supposed to have more male students, there are certain study programs that the number of female and male students is proportional as shown in the graph below. Even some of the Cum Laude graduates from this faculty are women.

Female students have also taken a significant role in the certain area which usually was dominated by male. Mapala UI is one of student clubs whose members enjoy outdoor activities (mountain climbing, jungle roaming, rock climbing, rafting, and paragliding), and mostly the members are male but the current leader of this club is female.
