## [10.6.8] Measures against discrimination Disability support services

### Universitas Indonesia Launches a Disability Service Unit

### An Alumni of Faculty of computer Science in UI Develops an App for People with Disabilities

### **Description :**

Universitas Indonesia has provide accessible facilities for disabilities in the campus environment. UI with The Faculty of Public Health (FKM) in collaboration with the Directorate of Student Affairs at Universitas Indonesia (UI) launched a Disability Service Unit of Universitas Indonesia. The launch of the Students with Disability Service Unit was held at the same time with the opening of The 2nd Faculty of Public Health UI Science Festival.

The construction of this service unit is in line with UI's mission to provide inclusive education for everyone. Not only teaching and learning services in classrooms, the presence of the Disability Student Service Unit also carries out the understanding to use disability tools and advocates for all UI citizens regarding the importance of disability awareness .

With the inauguration of the Disability Student Service Unit, it is hoped that students with disabilities who are currently studying at UI can reach their maximum potential both in the campus environment and when they are already in the community. The presence of the Disability Student Service Unit at UI is a movement to create a friendly and qualified environment for students with disabilities while at the same time showing equality on campus.

This application is prepared to provide information on the existence of facilities for people with disabilities in a building, such as accessible toilets, ramps, and other facilities. In addition, users of this application are not only for people with disabilities, but can also be used by the general public. In that way, they can help each other to provide this information.

UI also develops applications for people with disabilities . This application is designed based on a research of user needs and an effective interactive design using user interface principles and the needs of people with disabilities and non-disabilities. This resulted in a mobile application design to provide public facilities for people with disabilities. The data collected to design this application comes from online surveys and application evaluations using interview techniques.
