Figure 2. Environmental Quality Measurement Activities

**Description :**

Universitas Indonesia conducts observation and evaluation of the on-campus aquatic ecosystems quality twice a year. The monitoring processes focus on the ecosystem in the six lakes located in Universitas Indonesia. This activity is intended to evaluate the level of success of the management efforts that have been carried out and as the basis for sustainable campus environmental management. The activities carried out are environmental quality measurement, supporting data collection, data analysis, and report preparation.
