**Description :**

Universitas Indonesia supports and/or organises events aimed to promote conservation and sustainable utilisation of the land, including forests and wild land. To actualise reforestation and raise awareness on the importance of maintaining a stable learning environment, Universitas Indonesia (UI) through Faculty of Humanity planted endangered trees, such as Kepel/Burahol (*Stelechocarpus burahol*), Gandaria (*Bouea macrophylla*), Java Plum (*Syzygium cumini*), Khaya (*Khaya anthoteca*), Tengawang (*Shorea stenopetra*), dan Caphor (*Dryobalanops laromatica*). All of these plants are planted around the faculty yard.

There are threats on conservation attempts, such as encroaching conservation areas, illegal hunting for high-priced wildlife, killing or poisoning wildlife for invading human lives, also forest and land fires that happen every year. Also, there are cases of forest conversion for cultivation, houses, and national development. The various threats and pressures on the preservation of biodiversity are caused by flaws in the management of the conservation of natural resources and their ecosystem. One of them is Law no.5/ 1990 about the Conservation of Natural Resources and their Ecosystem, including the implementation of the regulation.

For example, some activities are discussing the Conservation Law No.5 / 90 Amendment, where it must follow the New Paradigm Direction of Conservation of Living Natural Resources and Ecosystems.
